

Government Market Systems

Find the pipeline that's already there before building anything new.

OVERVIEW

Government Market Systems work helps vendors find, structure, and win business-to-government revenue that's often sitting in plain sight — cooperative purchasing vehicles, open solicitations, and buying patterns most vendors never systematically track. Delivery starts with an audit of where opportunity is actually being lost, then scales into ongoing capture support for companies with real pipeline, up to embedded, end-to-end capture management for companies ready to run a full B2G motion. The approach is deliberately staged: each tier is usable on its own, and each one earns the next.

WHY THIS MATTERS

Government and cooperative purchasing is one of the most reliable revenue channels available to vendors positioned to access it — and one of the least understood. Vendors without a system for tracking cooperative vehicles like GSA, TIPS, or H-GACBuy routinely lose opportunities they were qualified to win, simply because no one was watching for them, or a proposal calendar slipped. Unlike private-sector sales, a missed government opportunity often can't be recovered later — the vehicle closes, the solicitation clock runs out, and it's gone. The cost of not solving this isn't slower growth, it's revenue that quietly expires.

WHAT'S INCLUDED — BY TIER

■ Starter

REVENUE FLOW AUDIT

A vendor who suspects they're losing opportunities but doesn't know where.

Find the leak. A full opportunity pipeline audit paired with cooperative-vehicle mapping (GSA, TIPS, H-GACBuy, and similar).

See what's already been missed.

Lost-opportunity analysis showing where qualified opportunities slipped, and why.

A clear next step. A prioritized action report — usable immediately, independent of any ongoing engagement.

■ ■ Growth

FRACTIONAL BD SUPPORT

A company with some pipeline that needs structure, not more headcount.

Pipeline, actually worked.

Ongoing opportunity research and qualification, plus proposal calendar management.

A real plan per pursuit. Capture planning built for each individual pursuit, not a generic playbook.

Visibility and vehicle strategy.

Monthly reporting and ongoing cooperative-vehicle strategy.

■ ■ ■ Custom

EMBEDDED CAPTURE PARTNER

A company that wants someone running the entire B2G motion.

NOT CURRENTLY QUOTABLE —
REQUIRES A PRIOR TRACK RECORD

End-to-end capture. Full capture management and proposal writing/orchestration across an entire pipeline.

Compliance handled. Compliance management and evidence-trail documentation built into every pursuit.

Through to delivery. Post-award handoff support once a bid is won.

WHAT'S NOT INCLUDED

- Proposal graphic design or desktop publishing beyond written content.
- Legal or contract review of awarded agreements.
- Guaranteed award outcomes — capture support improves odds, it does not guarantee wins.
- Subcontractor or teaming-partner sourcing beyond strategic recommendations.
- Registration or certification filing (SAM.gov, socio-economic certifications) itself.

Final scope, exclusions, responsibilities, and third-party costs are confirmed in the written proposal for each engagement.

WHO THIS IS FOR

Vendors with real product-market fit for government buyers who need the pipeline and process to actually win it.

NOT A FIT IF

You have no existing past performance and are looking for a guaranteed contract win — capture support cannot manufacture a track record.

HOW IT WORKS

01

Map

We map the vendor's current pipeline against the cooperative vehicles and solicitation sources relevant to what they sell, flagging where opportunities have been missed.

02

Design

Findings become a prioritized action plan — or, at Growth, an ongoing capture and vehicle strategy — scoped to the vendor's actual capacity to pursue new work.

03

Build

At Growth and Custom, proposals and capture plans are built pursuant by pursuit, with a proposal calendar keeping every deadline in view.

04

Operate

Reporting keeps the vendor informed of where each pursuit stands; at Custom, support continues through award and into post-award handoff.
